

VicForests Annual Report 2012 – clarification (p11)

VicForests wishes to clarify paragraph 3 of page 11 of the 2011-12 Annual Report which should be read as follows:

"VicForests conducted landscape-scale surveys for the Spot-tailed Quoll across the Central Highlands.

VicForests also supported a project investigating faunal occupancy of regenerating forest in East Gippsland. This study showed that a range of faunal groups were occupying regenerating forest at varying rates and has been written up as a minor thesis that formed part of a Masters Degree."
