**Purpose**

This document is produced to provide further information regarding coupes and VicForests planned timber harvesting operations. It does not form part of the Timber Release Plan.

**Additional background information**

VicForests will not be harvesting old growth forest.

No coupes are proposed for harvesting in Immediate Protection Areas.

In planning and conducting timber harvesting operations, VicForests will comply with the conservation measures and actions in the Greater Glider Action Statement.

Adaptive forest management practices may appear as multiple combinations of in-coupe retention and silviculture methods based on the presence, extent, and respective management requirements of High Conservation Values.

VicForests relies on sophisticated planning and surveying techniques, but also public input, to make planning decisions within the context of a changing environment, improvements in technology and changing rules and regulations, which govern what we do.

# **Table of Contents**

**1. Glossary**

**2. Coupe Information Schedule**

## Glossary

**Approximate Net Area** - The approximate area expected to be harvested within the coupe boundary. It is determined at a desktop level as the gross coupe area minus any areas likely to be excluded from harvesting. Net area is further assessed during individual coupe planning.

**Coupe** – A contiguous area of forest of variable size, shape and orientations from which timber is harvested or a roadline for access requirements.

**Coupe Number** – A unique 10-digit reference number that indicates the location of an individual coupe or roadline.

**Driveway Area** - An area between an existing permanent road and the coupe boundary within which a coupe-access road of up to 500m in length may be constructed. The coupe driveway is spatially represented by a separate polygon and has the same coupe address as the coupe it will access.

**Approximate Duration of Operation** - Approximate duration of timber harvesting operations, represents an estimate of total duration (based on full weeks) of operations. Operations in coupes may be split over seasons within a year or over multiple years. Duration can be affected by a range of variables including weather, harvesting crew and other unpredictable events.

**Forest Stand** – Describes the dominant forest type for each particular coupe (either Mixed Species, or Ash).

**Gross Area** - The total area of the coupe within which any individual harvesting or roadline coupe's operations will be conducted. This includes areas excluded from harvest and areas that may be harvested.

**Period of Harvest** - an approximate timeframe a coupe may commence harvesting.

**Roads/Roadline** – A spatially separate 'coupe boundary' with its own coupe address typically more than 500m in length:

- a) Road Improvement works (RDI), including minor adjustments to existing roads and tracks of the forest access network to ensure safe heavy vehicle access to coupe.
- b) Road Construction works (RDC), where new forest roads are established to ensure safe heavy vehicle access to coupe or major adjustments to existing roads.

**Road Length** – Indicates access coupes, they have their own coupe address, these can either be for road improvements or road construction. The approximate road that links a permanent road to a coupe.

**Silviculture Intent** – The planned type of harvesting method to be conducted within the coupe boundary. These harvesting methods are adapted to the specific coupe values and may include, but not limited to Single Tree Selection, Variable Retention, Seedtree or Clearfall. These adaptive methods are planned using available forest stand and sensitive value data. Multiple harvest methods may be employed within a single coupe boundary, boundaries of which will be reflective of regeneration, habitat retention and sensitive value requirements, including threatened species protections.

**Status** – To define the difference between a planned coupe (Current) and one that is regenerating (Current Regen).

## VicForests Coupe Information Package

Region	Forest Management Area	District	Coupe Number	Status	Nominated Period of Harvest	Approx Duration of Operation (weeks)	Silvicultural Intent	Gross Area (ha)	Approx Net Area (ha)	Driveway Area (ha)	Road Length	Forest Stand Description
